

How simulating with Imagine3D means never having to say sorry

Question # 4

Q: Can Imagine3D simulations prove that my inspection will work?

A: Yes, you can prove that a technique will work because you can see exactly where the ultrasound is going in your inspection. Change whatever you want; the probe, the part, even the sound modes and see the results immediately.

Question # 5

Q: I have problems explaining to others how an inspection will work. How can Imagine3D help?

A: Use Imagine3D to simulate and produce reports of any inspection. Put annotations on the inspection to label items and indicate regions of interest. Print or export A-scans, B-scans and sound field images. Imagine3D can even generate a list of probe angles, distances, as well as amplitudes and times between interfaces.
