

How Winspect can do exactly what you need it to do

UTEX Scientific Instruments Inc.

Question # 5

Q: Can Winspect simplify my production scanning?

A: Yes, we can economically construct a machine interface that can radically simplify your tank scanning or on-line inspection system. With a custom interface, you benefit from all of Winspect's capabilities while only seeing the controls needed to run your machine such as A-scans, gates, reject counters, load/unload controls, etc. Simplified interfaces reduce errors and minimize the time to train operators. When ordering your interface, just tell us what your operators need to see and do and we'll do the rest.

Question # 11

Q: Can I perform more than just ultrasonics with Winspect?

A: Yes, Winspect can collect, analyze and present signals from ultrasonic, eddy current, laser profilometry and automated liquid penetrant systems. Winspect can even collect signals from all of these methods at the same time. Because of Winspect's flexibility and large list of supported hardware, it will be the most economical and only software package you will ever need.
